Docket No. 99D-0557

1250 '99 APR 27 P1:48

To Whom It May Concern,

The following expresses my views & opinions on xenotransplantation.

- 1) Responsible health authorities should ban all xenotransplants outright, regardless of the species, particularly because of the threats of inter-species virus transmission.
- 2) Pigs are being considered as the source animal of choice for xenotransplants. But there is no evidence that pigs are any safer than nonhuman primates. We have plenty of evidence that pig viruses would be just as dangerous as nonhuman primate viruses (i.e. influenza, PERVs, paramyxovirus, and earlier this year, the Nipah (Hendra-like virus) in Malaysia that has resulted in hundreds of human infections, 98 human deaths, and 640,500 pigs slaughtered since March 20th.
- 3) The US should follow Europe's lead. In January 1999, the Council of Europe, representing 40 European countries, recommended a world-wide ban on xenotransplants.
- 4) There are safer and more humane alternatives to xenotransplantation that are not being explored by regulatory authorities. These include aggressively promoting preventive medicine, and increasing human organ donation rates as many European countries have successfully done through various legislative schemes.
- 5) The US General Accounting Office published a report on Organ Donation in April 1998 which revealed an untapped donor pool of 150,000 people in the US. The Department of Health and Human Services should fully investigate the points made in that report before allowing xenotransplants to go forward.

Sincerely,

Suzanna Hermans
